Chapter 1. Introduction

1.1 Safety Precautions

- All safety instructions should be read and understood before the unit is operated.
- The owner’s manual and safety instructions should be retained for future reference.
- Unplug this unit from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth only.
- Keep away from wet, magnetic, and flammable surfaces or substances.
- Always use the correct external power supply (indicated on the product label) when operating this unit.
- This unit may be equipped with a 3 wire grounding-type plug - a plug having a third (grounding) pin. This pin will only fit in to a grounding type power outlet. If you are unable to insert the plug in to the outlet, contact your electrician to replace your obsolete outlet.
- Air vents should be kept clean and unobstructed at all times.
- Please refrain from using frayed power cords and damaged wall outlets.
- Do not place any heavy objects or equipment on top of the unit.
- To prevent electrical damage, TURN OFF the power to this unit before inserting or removing INPUT/OUTPUT slot cards.

If you experience any malfunctioning of product or have any question as to operation of the product, please contact our customer service center.

1.2 Declaration of Conformity

1.3 What's in the Box

- Power Adapter – D12V, 5A, 60W
  D12V, 6A, 60W (Only for HX-8800-U)

- RS-232C & LAN cables
- Rack Ears
- Owner’s manual
1.4 Product Introduction
The new HX Series HDMI Integrated Matrix Routers provide switching options for up to eight (8) HDMI inputs to any eight (8) HDMI outputs, and feature PureLink’s legendary EDID/HDCP Management System, consistently praised by system integrators as the most reliable in the industry. Together with full HDCP, 4k2k, and HDMI v1.4 compatibility and PureLink’s uncompromising design and manufacturing standards, the HX-8800 delivers unparalleled quality and value.

Matrix Switching for up to 8 HDMI™ Inputs to any 8 HDMI™ Outputs
PureLink’s HX Series routers are available in the following models and configurations: HX-4200-U (4x2), HX-4400-U (4x4), HX-8200-U (8x2), HX-8400-U (8x4), and HX-8800-U (8x8)

Supported Resolutions
HDTV resolution up to 1080p @ 60Hz, and UHD (4K2K)
PC resolution up to 1920x1200 @ 60Hz

HDMI v1.4 Compatibility
Full 3D & 48-Bit Deep Color support, 7.1 Channel Dolby TruHD & DTS MasterHD

Control Options:
Built-in RS-232C and LAN for external control via PC or Controller

**INPUTS**: HDMI v1.4 Input ports 1~4 (Female type)

**OUTPUTS**: HDMI v1.4 Output ports 1~2 (Female type)
1.13 Installation Guidelines

The following installation settings are recommended for optimal performance.

- Operational temperature should be 30° C or below
- Operational humidity should be 60% or below
- Operational environment should be dust-free and well ventilated
- Stabilized AC input power (AVR-based power supply) is highly advised
Chapter 2. Product Features

HX series Matrix Router receives signals from HDMI output ports or equipment compliant up to HDMI Ver. 1.4, and sends them to multiple displays.

- Compliant to HDMI v1.4, the next generation standard for A/V
- 19" standard rack type case (1U)
- Imbedded monitor distribution function for all output channels
- Enhanced quality and color of digital signals
- External EDID read function, supports HDMI or DVI displays.

Supporting Function
- Supports high resolution up to UHD (4K2K)
  PC Resolution up to 1920 x 1200 @ 60Hz
  HDTV Resolution up to Ultra HD 4K
  4096 x 2160 @24/25/30Hz
  (RGB/YCbCr 4:4:4 8 bits, YCbCr 4:2:2 8/10/12 bits)
  4096 x 2160 @50/60Hz (YCbCr 4:2:0 8 bits)
- Control through 4 different method
  - Select directly with front push buttons
  - Control method through RS-232C COM port
  - Select by LAN (TCP/IP): optional
- It has an instantaneous noise protection circuit in input and output ports; therefore it can protect expensive equipment from fault caused by noises (if any).
- Convenient to change firmware through direct update by PC.
Chapter 3. Operational guidelines

3.1 Main Menu User Guide

Turn the power switch on
Once all channel indicator lights are on, the first step is completed.

Channel View and Input Selection
- IN / OUT indicates connection status
- Press the IN / OUT KEY to display each channel’s connection status and video resolution
- Press the CANCEL KEY to return to the initial screen

Create Menu
- Select an INPUT channel
- Press the IN / OUT KEY to set a channel
- Press the ENTER KEY to save or switch input channels
- Press CANCEL to reverse a selection and return to the previous screen

Menu
Select a Menu button to view the sub-menu
Use the Create (UP) / Preview (Down) buttons to control the sub-menu options
On the sub-menu, user can check and configure below settings;
- EDID Write
- EDID Store
- Product ID
- RS232
- LAN
- Factory Reset
- Firmware Version
EDID Burn

i) Int EDID Burn
- On this menu, select an EDID from the library and save it on to the Input EEPROM. HX series Matrix Router has 14 selectable most widely used EDID data pre-programmed and 6 empty slots that can be used to upload and save EDID data from any external display device.
  ● Select Internal EDID using UP (Create) and Down (Preview) buttons
  ● Select Input# where selected EDID data will be saved on to. Multiple Inputs can be selected at once.
  ● Push enter button to save
* “P” will display on the LCD when EDID is successfully saved, “F” will display on the LCD when EDID is NOT successfully saved.

ii) Ext EDID Burn
- This menu is to emulate EDID data from any display devices that are connected to the Matrix Router's Output via copper cables and save it on to Matrix Router's Input EEPROM.
  ● Select Output #
  ● Selected Output's display device's EDID information will be displayed
  ● Select Input# where selected EDID data will be saved on to. Multiple Input can be selected at once.
  ● Push enter button to save.
* “P” will display on the LCD when EDID is successfully saved, “F” will display on the LCD when EDID is NOT successfully saved.

EDID Store
- On this menu, user can emulate EDID data from any display devices that are connected to Matrix Router's Output via copper cables and save it on to the EDID library for future use.
  ● Select Output #
  ● Selected Output's display device's EDID information will be displayed
  ● Select empty slot on EDID library where selected EDID data will be saved on to.
  ● Push enter button to save.
* “P” will display on the LCD when EDID is successfully saved, “F” will display on the LCD when EDID is NOT successfully saved.

Router ID
- By setting different ID to the Matrix Router, up to 255 units of HX series Matrix Router can be connected and operated in the same network either via serial or LAN communication. Router ID can be set between 001 ~ 255.
* Factory default setting is 001
Note) Router ID is associated with commend control Protocol; therefore, it is important to remember Matrix Router’s current Router ID.

- **RS232**
  - There are four values those need to be set for serial communication; baud rate, data bits, stop bits, and parity. Click and select each value using touch screen and push enter button to save.
  - Factory default (recommended) settings for serial communication are:
    - Baud rate - 19200
    - Data bits - 8
    - Parity - none
    - Stop bits - 1
    - Flow control – none

  and supported settings are:
  - Supported Baud Rate: 4800 Bps, 9600 Bps, 14400 Bps, 19200 Bps, 38400 Bps, 57600 Bps, 76800 Bps, 115200 Bps
  - Supported Data bit: 5 bit, 6 bit, 7 bit, 8 bit
  - Supported Parity: Non, Even, Odd
  - Supported Stop bit: 1 bit, 2 bit

- **LAN**
  - HX series Matrix Router can be controlled through the 10/100 base Ethernet port using a command line interface.
  - There are four values that need to be set for LAN communication; IP address, Gateway address, Subnet mask, and Mac address. Please use below button indication to configure LAN settings:

    (For HX-8800-U, HX-8400-U, HX-8200-U):
    - * Input #1 : 1
    - * Input #2 : 2
    - * Input #3 : 3
    - * Input #4 : 4
    - * Input #5 : 5
    - * Input #6 : 6
    - * Input #7 : 7
    - * Input #8 : 8
    - * Output #1 : 9
    - * Output #2 : 0
(For HX-4400-U, HX-4200-U):

* Input #1 : 1\textsuperscript{st} set \(1^{st}\) set.xxx.xxx.xxx) * Output #1 : To move cursor left

* Input #2 : 2\textsuperscript{nd} set (xxx.2\textsuperscript{nd} set.xxx.xxx) * Output #2 : To move cursor right

* Input #3 : 3\textsuperscript{rd} set (xxx.xxx.3\textsuperscript{rd} set.xxx) * Create button: Numbers going up

* Input #4 : 4\textsuperscript{th} set (xxx.xxx.xxx.4\textsuperscript{th} set) * Preview button: Numbers going down

Please use Enter button to save the setting

Note) Please contact your Network Administrator for network information to avoid any IP conflict.

Factory default settings for LAN communication are:

IP Address: 192.168.000.002
Gateway Address: 192.168.000.001
Subnet Mask: 255.255.255.000
Mac Address: Matrix Router has its own MAC address and that MAC address allows user to communicate with PC network solutions without any communication conflict.

**How to change the LAN IP address setting using the front panel key of the matrix switcher for HX-4200:

1. Go to front of the switcher.

2. Press the ‘Menu’ button

3. Use the ‘Create’ and ‘Preview’ buttons to shift up and down

4. Choose ‘5. Lan’ and press Enter button

5. Choose ‘1. IP Address’ and press Enter button

6. Now you have the IP Address shown on the screen

7. The cursor will be located on the first set of numbers of the default IP Address

8. Use the ‘Create’ and ‘Preview’ button to change numbers

9. a. To go from left and right, use ‘Out1’ and ‘Out2’ buttons

   b. To change numbers up and down, use ‘Create’ and ‘Preview’ buttons

   c. To move to the second set of numbers on the ip address, Press ‘In2’ button

   d. To the third set of numbers on the IP address, Press ‘In3’ button

   f. To the fourth set of numbers on the IP address, Press ‘In4’ button to move

(Note: Data will not go higher than 255 for any of the column or it will show error screen if you go higher)

10. After configuring to the correct IP Address, press Enter button

**Use same method to change Gateway, Subnet Mask IP Address.
Factory Reset

Factory reset will put the general setting back to the factory default mode.

Factory default setting value:

- RS-232 Baud rate: 19200 Bps
- IP Address: 192.168.000.002
- Gateway: 192.168.000.001
- Input/output Connection: No Connection
- Product ID: 255

- All Video/Audio switching connection becomes clear
- Serial communication setting will be restored back to the factory default
  - Baud Rate: 19200, Data Bits: 8, Parity: None, Stop Bits: 1
- LAN Communication setting will be restored back to the factory default
  - IP Address: 192.168.000.002
  - Gateway Address: 192.168.000.001
  - Subnet Mask: 255.255.255.000

Firmware Version

- Matrix Router’s firmware version can be checked using Up/Down buttons
Chapter 4. Communication Code Configuration

4.1 Control Programmer’s Guide (Code Structure and Examples)

This section is designed for programmers who wish to create their own control programs using the command code. All PureLink digital matrix routers provide a simple character stream control used by external control devices attached to a PureLink device. Command codes are used primarily for control, during system installation and setup, and for diagnostic purposes.

4.2 Overview

Command code is a set of alphanumeric characters that combine to form control commands. Command code strings are entered into a terminal emulation program (such as windows HyperTerminal) running on an external control device. The control device (PC, third-party controller) sends the commands to the system. Control devices must be able to send and receive ASCII or HEXA code via an RS-232 or Ethernet port.

4.3 Command Code Formats

A command code is a series of command characters and numbers used to send commands to the system. Commands include basic formulas for creating and disconnecting switches, as well as for verifying the status of switches.

In a command code, each character is either general command (e.g., C for connect) or an identifier that indicates what the following number designates (e.g., “O” and the number following it designate an “output number”). The command code *255CI01O01! Can be interpreted as follows: (*) Starting the command code (255) Router ID is 255 (C) Create connection on (I01) Input 01 to (O01) Output 01 (!) take the command. For a complete list of command characters and their functions, see pages 16-

Ack value (Acknowledge value: Response from Pure Link device) will be echoed back to the terminal screen as the unit accepts them. When a command is successfully executed, all of the characters appear containing the character “s” which stands for status. For example,

Ex 1) Command (Connect Input 1 to Output 1)

*255CI01O01!  
Ack value
*255sCI01O01!

Ex 2) Command (Check Input connection status on Output 3)

*255?O03!  
Ack Value
*255s?O03O03!
4.4 General Rules for Command Codes

The commands are coded in ASCII and HEXA. Please refer to Table 3.1 on pg. 16 for detailed descriptions of keys and functions. A basic command code setup is shown below;

Ex) "255CI01O01! →

Start (*) + Router ID (255) + Command (C) + Input number (I01) + Output number (O01) + End (!) + Enter (→)

▶ A command line allows execution of only one command. Multiple commands require execution of multiple strings; one command per string.
▶ All s begin with * (Start) byte.
▶ All s end with ! (End) byte.
▶ All s will be executed when → (Enter) is entered.
▶ The correct Router ID must be entered in a command code. Systems will not react to the command if a wrong Router ID is entered. The Factory Default Router ID is set to 255 and the universal Router ID is 999. Systems will react to the command whenever universal Router ID is entered in command code.
▶ Command codes typically are not case-sensitive.
▶ **Audio Command is only available for MXA series product**
▶ To specify multiple inputs and outputs, enter a "," (Comma) between numbers.
(Ex., "255CI01O01,02,03! →: Connects Input 01 to Output 01, 02, and 03)
▶ Use - (Hyphen) for range connection.
(EX., "255CI01O01-04! →: Connects Input 01 to Output 01,02,03, and 04)
### Table 3.1 Command Codes Characters Table

The table below shows command code characters (keys), which are used to generate control commands, their functions, and short function descriptions.

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>

</tbody>
</table>
4.5 Command Ack (Acknowledge) Value Response

When command codes are entered into a terminal emulation program (such as HyperTerminal) and are accepted by the system, they respond back to the terminal screen one at a time, as noted below in the table. The complete command has executed successfully when all of the entered characters including “s” which stands for status, appear. If a command character is not accepted, a different character than the one entered appears and all or part of the command has not been executed.

**Ack (Acknowledge) Value Response Table**

The following table shows ack value response characters along with their descriptions and meanings, which may appear instead of the initially entered character or number. If these characters appear, all or part of the command has not been executed.

<table>
<thead>
<tr>
<th>Ack value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input 1 is not connected</td>
<td>No information in each channel.</td>
</tr>
<tr>
<td>Command Code Error</td>
<td>Indicates that system has rejected all or part of the command</td>
</tr>
<tr>
<td>Router ID Error</td>
<td>Indicates that the wrong ID number was entered</td>
</tr>
</tbody>
</table>

<tr>
<td>&quot;255CI01O01!&quot;</td>
<td>Command Code Error</td>
<td>The command was not executed because “!” (End) was not included</td>
</tr>
<tr>
<td>&quot;300CI01O01!&quot;</td>
<td>Router ID Error</td>
<td>The command was not executed because the actual Router ID and entered Router ID did not match</td>
</tr>
</tbody>
</table>

4.6 Connecting Switches

A switch is an active connection between an input (source) signal and one or more output (display) devices. The signals connected in a switch command are either individual signals or groups of signals coming through the connectors on the rear of the unit.

The “C” key initiates a Connect command for routing a switch. The characters and numbers that follow the “C” command tell the system, which inputs and outputs to connect. The last character “!” is found at the end of a command code which tells the system to execute the command.
For example, the command code `*255CI01O01!` can be interpreted as follows: (*) Starting the command code (255) Router ID is 255 (C) Create connection on (I01) Input 01 to (O01) Output 01 (!) take the command. For a complete list of command characters and their functions, see examples below.

To connect a switch:
1. Enter the Connect command below. Replace the “#”s with the input and output number(s).
   `*255CI#O#!`

Examples (Connect):

<table>

4.7 Disconnecting Switches

The characters and numbers in a Disconnect command tell the system which input or output to disconnect. The “D” key initiates a Disconnect command for routing a switch. The characters and numbers that follow the “D” command tell the system that inputs and outputs to disconnect. The last character “!” is found at the end of the Command code, which tells the system to execute the command.

For example, the command code `*255DI01O00!`

It can be interpreted as follows: (*) Starting the command code (255) Router ID is 255 (D) Disconnect on (I01) Input 01 to (O00) Output 00 (!) take the command. For a complete list of command characters and their functions, see the command list below

1. Enter the Disconnect command below. Replace the “#”s with the input and output number(s).
   `*255DI#O#!`

Examples (Disconnect):

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*255DI01O00!</td>
<td>Disconnect Input 1 to no Output (00)</td>
</tr>
<tr>
<td>*255DI00O03,04,05!</td>
<td>Disconnects Outputs 3, 4, and 5</td>
</tr>
<tr>
<td>*255DI00O03-06!</td>
<td>Disconnects output 3, 4, 5, and 6</td>
</tr>
</tbody>
</table>
4.8 Connection Status Check

A connection status can be checked to confirm that the switch has been correctly executed or to confirm correct routing to multiple outputs. The characters and numbers in a status command tell the system which input or output to check.

1. Enter the Connection status check command below. Replace the “#”s with the input and output number(s).

   \*255?I#! or \*255?O#!

Examples:

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*255?I01!</td>
<td>Check Output connection status on Input 1</td>
</tr>
<tr>
<td>*255?O07!</td>
<td>Check Input connection status on Output 7</td>
</tr>
<tr>
<td>*255?ALLIO!</td>
<td>Check all Input and Output connection status</td>
</tr>
</tbody>
</table>

Router ID Check

User can confirm the router’s Current ID setting: Universal Router ID is 999

Example:

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*999I000!</td>
<td>Check Router’s ID</td>
</tr>
</tbody>
</table>

Firmware Version Check

User can confirm router’s current firmware version.

Example:

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*999?version!</td>
<td>Check Router’s Firmware version</td>
</tr>
</tbody>
</table>

Baud Rate Setting

Network Configuration: User can check and set network configuration for LAN control.

Examples:

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*255NN0000!</td>
<td>Check current Network Information</td>
</tr>
<tr>
<td>*255NIP192.168.000.004!</td>
<td>Set IP address at 125.135.199.004</td>
</tr>
<tr>
<td>*255NSM255.255.255.000!</td>
<td>Set Subnet Mask at 255.255.255.000</td>
</tr>
<tr>
<td>*255NGW192.168.000.001!</td>
<td>Set Gate Way at 192.168.000.001</td>
</tr>
</tbody>
</table>
Connection Checking: User can check the connection status.

Example:

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*255H000!</td>
<td>Check connection status</td>
</tr>
</tbody>
</table>

Function Key On/Off:
User can enable or disable the function key located on physical router’s front panel.

Example:

<table>
<thead>
<tr>
<th>Command Codes</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*255K000!</td>
<td>Function key On/Off</td>
</tr>
</tbody>
</table>
**4.9 LAN CODE CONFIGURATION**

Using TELNET protocol with LAN(TCP/IP)

The HX series Matrix Router can be controlled from remote locations through the LAN port using WINDOWS XP DOS prompts, hyper-terminal, or TELNET program (the control code is fully compliant with RS-232C).

- Enter TELNET <Router IP Address> in the DOS prompt
- Message indicating TELNET connection will appear
- Router ID verification command code
  - Send "*2551000!"
  - Router will send response: "*255sI Router ID 255"
Chapter 5. Firmware Update Instruction and Warranty Information

5.1 Firmware Update Instruction

1. Set HX series Matrix Router's baud rate to 115200bps using front panel buttons or control command. (Data bits: 8bit, Stop bits: 1bit, Parity: disable)

2. Connect PC to HX series Matrix Router using USB cable (update cable is included in an original box)
   - Please disconnect RS-232 cable from the Matrix Router during firmware update.

Confirm if HX series Matrix Router (USB serial port) is properly connected to the PC on PC's device manager section.

3. Create a hyper terminal connection (connect it using same com port number; COM3)
   - Create a name (ex, PureLink)
   - Bits per second: 115200bps
   - Data bits: 8
   - Parity: None
   - Stop bits: 1
   - Flow control: None
4. Hyper terminal setting
   Go to file --> Properties
5. Go to Settings --> Click the ASCII Setup

6. Check box - Echo typed characters locally
7. Press OK

8. Type "program" and then Enter
9. Select number of appropriate option (Main, input, output) (For this instruction, number 3(Output) is used.)

10. Go to Transfer --> Send File

12. Select Ymodem
13. Press send to upload the firmware

14. Once firmware update is completed, disconnect the cable and power cycle the unit.
6.1 Manufacturer’s Warranty (2-Year)

Dtroversion warrants this HX Series HDMI Integrated Matrix Router to be free from defects in workmanship and materials, under normal use and service, for a period of two (2) years from the date of purchase from Dtroversion or its authorized resellers.

If the product does not operate as warranted during the applicable warranty period, Dtroversion shall, at its option and expense, execute one of the following as necessary:

1. Repair the defective product or part
2. Deliver to customer and equivalent product or part to replace the defective item
3. Refund to customer the purchase price paid for the defective product

All products that are replaced become the property of Dtroversion, LLC. Replacement products may be new or reconditioned. Repaired or replacement products or parts come with a 90-day warranty or the remainder of the warranty period. Dtroversion shall not be responsible for any software, firmware, information, or memory data loss of contained in, stored on, or integrated with any products returned to Dtroversion for repair under warranty.

6.2 Customer Service

Any customer service inquiries can be submitted electronically through the Q&A form on our website (www.purelinkav.com). For immediate assistance please contact us at (201) 488-3232 to reach our customer care or tech support team.
